DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1, 2, 6-9, 23 and 25 are rejected under 35 U.S.C. 102(e) as being anticipated by Eichmann et al. (6,495,763).

Eichmann et al. discloses (Figures 5 and 7) a dielectric bias system for communicating a signal between a first electrical device having an output

connection to supply the signal and a second electrical device having an input connection to receive the signal (not shown), the system comprising a first conduction path, dielectric material positioned along the first conduction path such that transmission of a signal along the first conduction path tends to change the transmission properties of the first conduction path toward a relatively steady state as the dielectric material is exposed to the signal, and a means for impressing a bias potential across the dielectric material, the bias impressing means including at least one conductor independent of the first conduction path (re claims 1, 8 and 9). Eichmann et al. also discloses the bias impressing means including at least two conductors independent of the first conduction path (re claim 2), the signal being audio or video (re claims 6 and 7), and applying an energy source to said at least one conductor (in operation, an energy source being transmitted through the at least one conductor of Eichmann et al.) (re claims 23 and 25).

Allowable Subject Matter

3. Claims 10-22 are allowed.
4. Claims 3-5 and 24 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. The following is a statement of reasons for the indication of allowable subject matter: the prior art of record does not teach or suggest a dielectric bias system comprising all the features as recited in the claims and in combination with the bias impressing means including an external energy source (re claims 3, 10,17).

Response to Arguments

6. Applicant's arguments with respect to claims 1, 23 and 25 have been considered but are moot in view of the new ground(s) of rejection.
